EXPERIENCE

MEDLIFY | Senior Software Engineer
June 2022 - Jan 2024 | Remote

- Projects - Johnson & Johnson
- Our goal with Medlify was to build a platform akin to 'Shopify for Pharmacies', a suite of re-usable services that allows pharmacies to set up their own E-commerce stores. During this project, I:
- **Implemented multitenant microservices** from the ground up, employing NestJS, Kafka, and Redis which can handle over a million visitors weekly, keeping things smooth and fast.
- **Implemented Auth** including login/register, and logout flow for the product after researching multiple providers.
- **Set up and tested a robust CI pipeline** for the project.
- **Led weekly stand-up meetings**.
- **Conducted and took part in backend architecture brainstorming sessions**.

VERTRICAL | Software Engineer
March 2021 - May 2022 | Remote

- Projects - Optum and Mark Cuban Cost Plus Drugs
- Was a key player in getting **Mark Cuban's Cost Plus Drugs** off the ground in just three months also handled a lot of the frontend work and helped integrate our systems. This effort helped pull in **6M visits and 200K sign-ups** in just the first month for Mark Cuban's project – that's a lot of people loving what we built! Also during this project, I:
- **Developed various user-facing frontend pages** such as the homepage, product page, mission, and contact.
- **Maintained and contributed to a component library** that eliminated redundancy.
- **Implemented an auto-refill feature** for the Prescription Manager in Consumer Health Services.
- Worked extensively on **managing and handling users' personal details & health info** along with checkout & order flow.
- **Implemented E2E tests** using Cypress and writing comprehensive regression and smoke tests.
- **Debugged & fixed various defects** on the frontend.
- Managed SKU via **Plytix**, & using **Contentful** for static content management.

SKILLS

LANGUAGES / FRAMEWORKS
Javascript • Node • Express • React • Typescript
Nest.js • Next.js • React Native • Redis • Kafka
Koa • Gatsby

UI & UX
Tailwind • SCSS • Styled Components • Figma

DATABASE
MySQL • PostgreSQL
MongoDB

TESTING
Jest • RTL • Cypress

ORM / ODM
TypeORM • Prisma
Mongoose

TOOLS & TECH
Docker • GIT • Linux

PROJECTS

Johnson & Johnson's VERSALIE | Website
- Contributed to the development of Versalie™, offering support and menopause education in one place. Collaborated on community resources, product shopping, and connecting users with menopause-trained specialists.

Mark Cuban's Cost Plus Drugs Company [MCCPDC] | Website
- Played a key role in the development of Mark Cuban's Cost Plus Drug homepage. Facilitated access to safe and affordable medication with transparent pricing.

UnitedHealth Group's OPTUM | Website
- Contributed to the enhancement of Optum's healthcare services, leading to better experiences, improved health, and reduced costs for users.

OpenAI Playground | Website
- Developed an interactive OpenAI Playground, leveraging the OpenAI API. Empowered users with the ability to select from various OpenAI models, track token usage insights, and finely control completion variables.
